Greg Ward

# Recursive Ray Tracing

- Assume only significant irradiance is in directions of light sources, specular reflection, and refraction

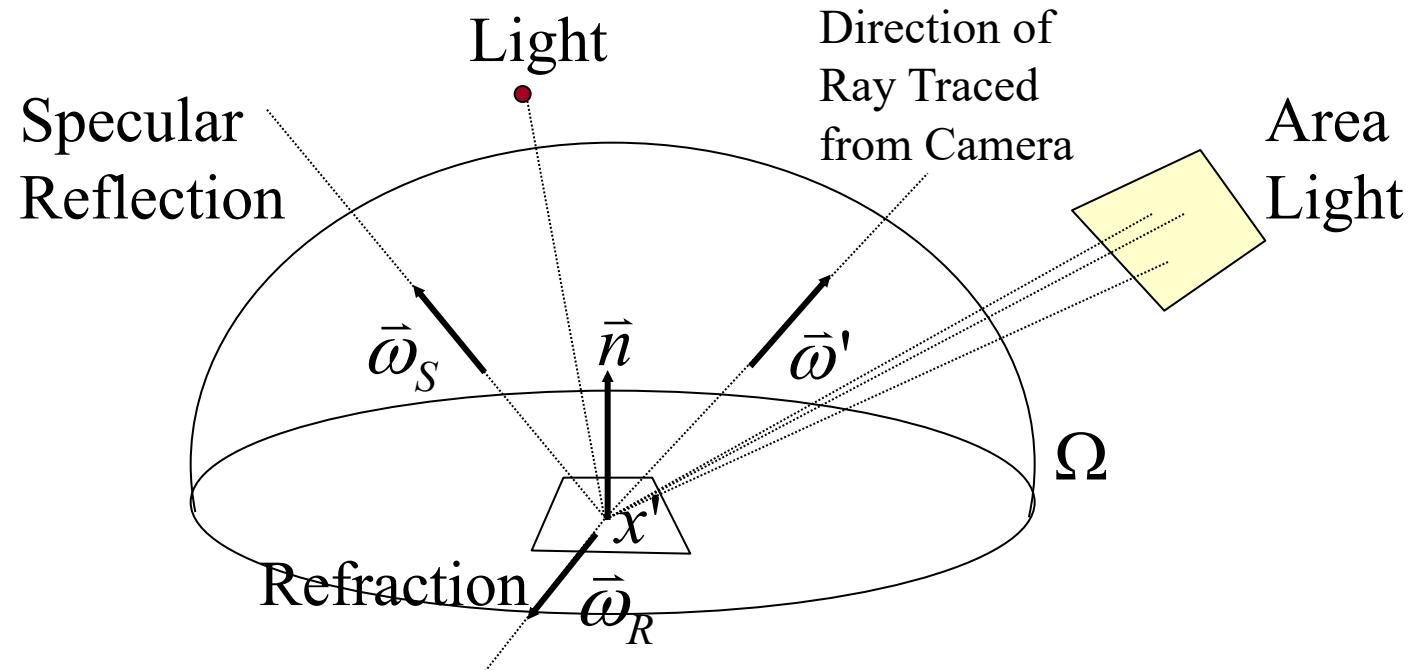

$$L_o(x', \vec{\omega}') = L_e(x', \vec{\omega}') + \int_{\Omega} f_r(x', \vec{\omega}, \vec{\omega}') (\vec{\omega} \cdot \vec{n}) L_i(x', \vec{\omega}) d\vec{\omega}$$

# Recursive Ray Tracing

- Compute radiance in outgoing direction by summing reflections from directions of lights, specular reflections, and refractions

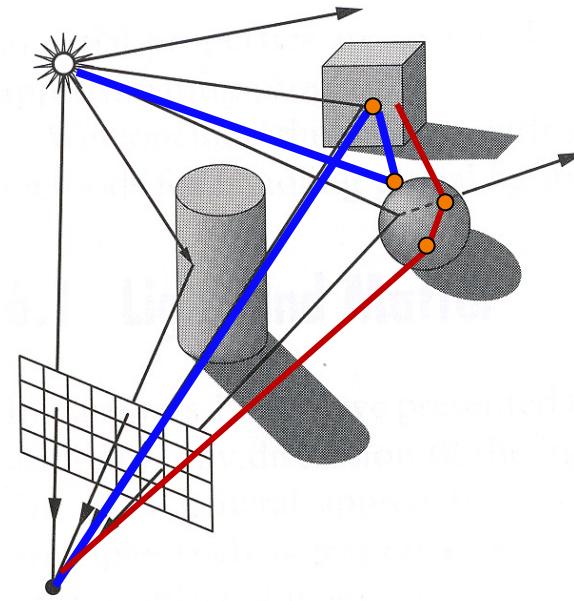

$$I = I_E + K_A I_{AL} + \sum_L \left( K_D (N \cdot L_i) + K_S (V \cdot R_i)^n \right) S_L I_L + K_S I_R + K_T I_T$$

# Recursive Ray Tracing

- Same as ray casting, but trace secondary rays for specular (mirror) reflection and refraction

$$I = I_E + K_A I_{AL} + \sum_L \left( K_D (N \cdot L_i) + K_S (V \cdot R_i)^n \right) S_L I_L + K_S I_R + K_T I_T$$

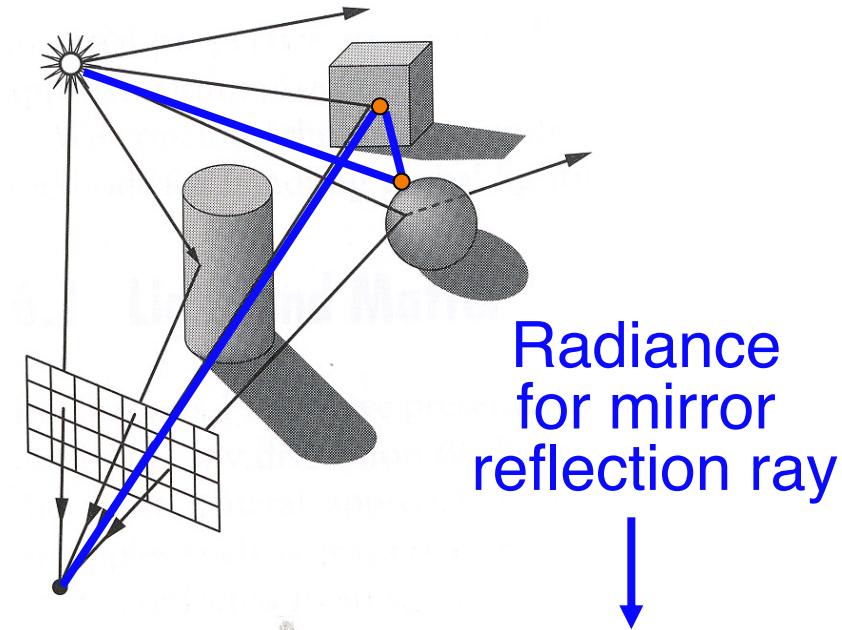

# Specular Reflection

- Trace secondary ray in direction of mirror reflection
  - Evaluate radiance along secondary ray and include it into illumination model

[wikimedia.org/wikipedia/en/c/c1/Cloud\\_Gate\\_\(The\\_Bean\)\\_from\\_east.jpg](https://commons.wikimedia.org/wikipedia/en/c/c1/Cloud_Gate_(The_Bean)_from_east.jpg)

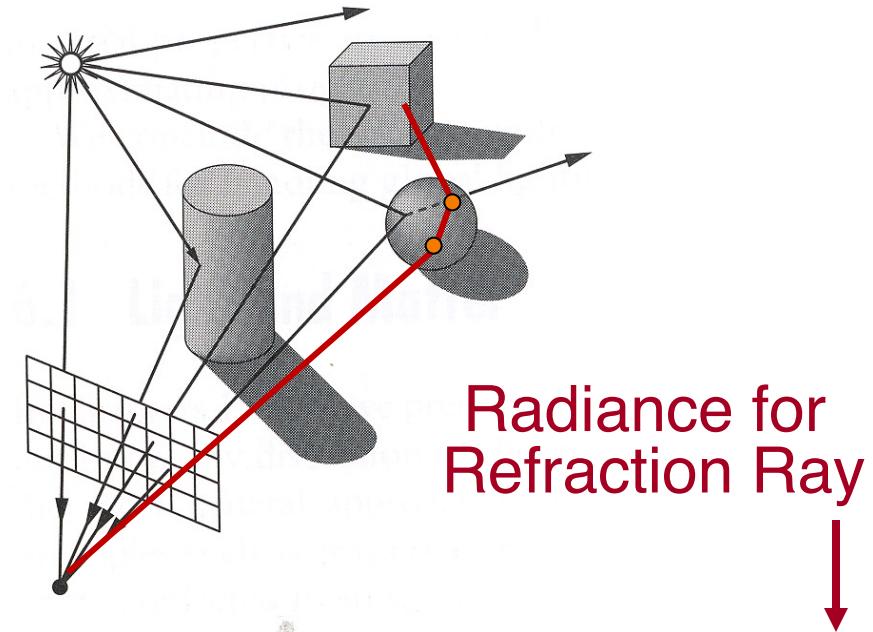

$$I = I_E + K_A I_{AL} + \sum_L \left( K_D (N \cdot L_i) + K_S (V \cdot R_i)^n \right) S_L I_L + K_S \mathbf{I}_R + K_T I_T$$

# Refraction

- Trace secondary ray in direction of refraction
  - Evaluate radiance along secondary ray and include it into illumination model

$$I = I_E + K_A I_{AL} + \sum_L \left( K_D (N \cdot L_i) + K_S (V \cdot R_i)^n \right) S_L I_L + K_S I_R + K_T \mathbf{I}_T$$

# Recursive Ray Tracing

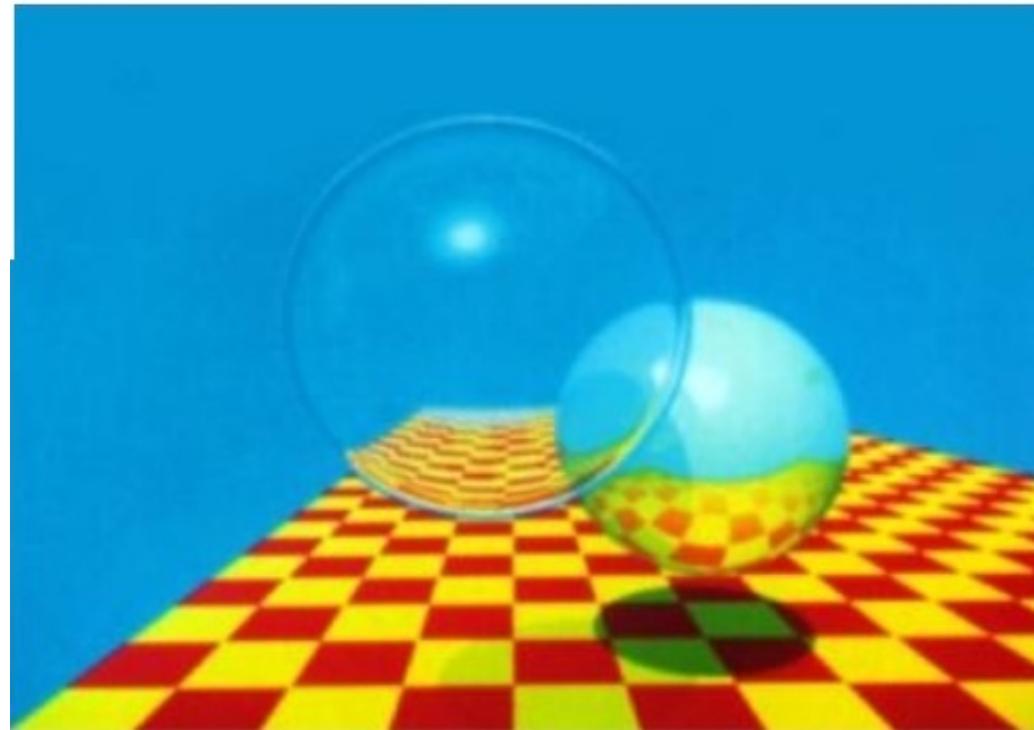

- ComputeRadiance is called recursively

```
R3Rgb ComputeRadiance(R3Scene *scene, R3Ray *ray, R3Intersection& hit)
{
    R3Ray specular_ray = SpecularRay(ray, hit);
    R3Ray refractive_ray = RefractiveRay(ray, hit);
    R3Rgb radiance = Phong(scene, ray, hit) +
        Ks * ComputeRadiance(scene, specular_ray) +
        Kt * ComputeRadiance(scene, refractive_ray);
    return radiance;
}
```

# Rendering Equation (1)

$$L_o(x', \bar{\omega}') = L_e(x', \bar{\omega}') + \int_{\Omega} f_r(x', \bar{\omega}, \bar{\omega}') (\bar{\omega} \cdot \bar{n}) L_i(x', \bar{\omega}) d\bar{\omega}$$

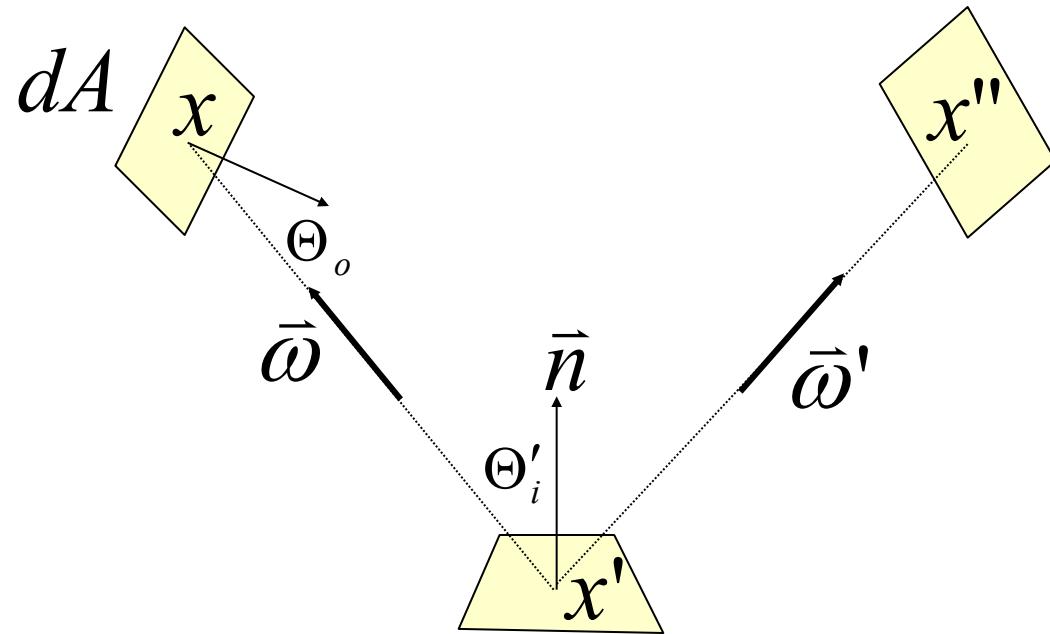

# Rendering Equation (2)

Kajiya 1986

# Rendering Equation (2)

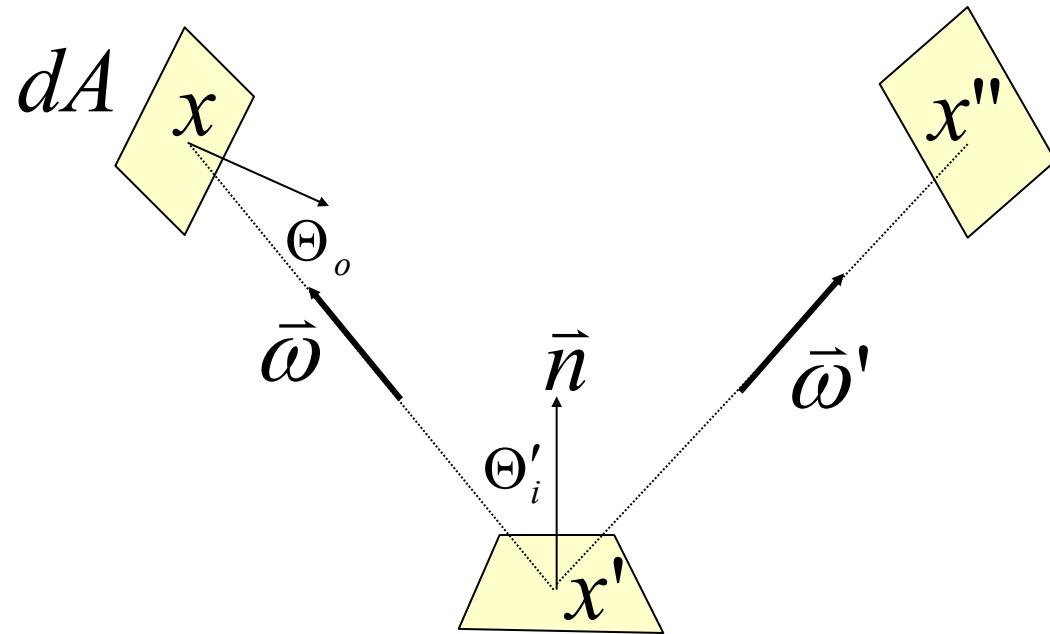

$$L(x' \rightarrow x'') = L_e(x' \rightarrow x'') + \int_S f_r(x \rightarrow x' \rightarrow x'') L(x \rightarrow x') V(x, x') G(x, x') dA$$

*Kajiya 1986*

# Rendering Equation (2)

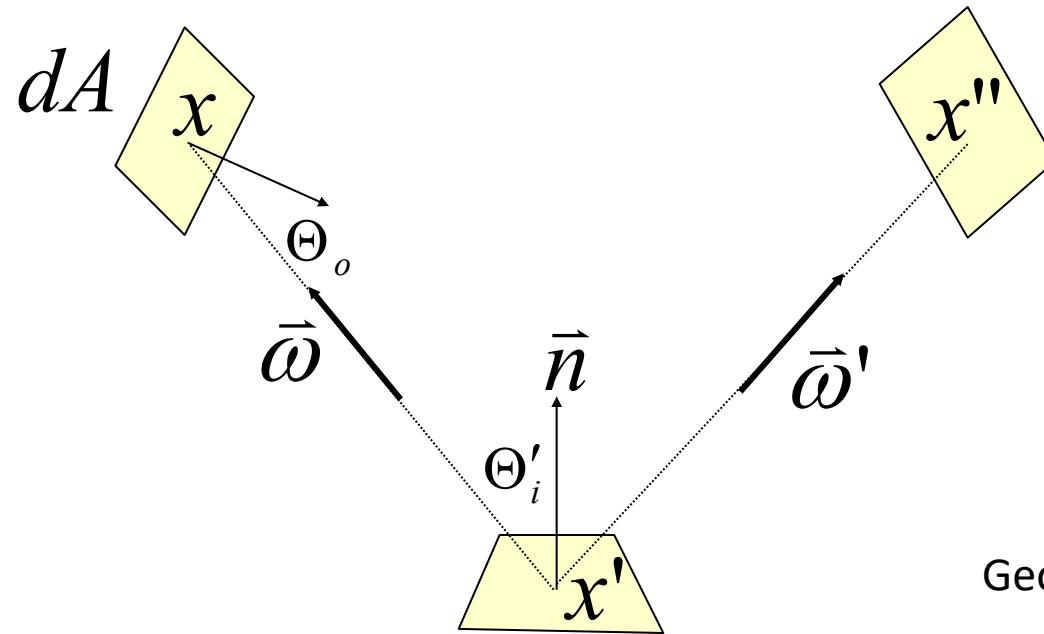

Visibility ( $V$ )

$$L(x' \rightarrow x'') = L_e(x' \rightarrow x'') + \int_S f_r(x \rightarrow x' \rightarrow x'') L(x \rightarrow x') V(x, x') G(x, x') dA$$

Kajiya 1986

# Rendering Equation (2)

Geometry (G)

$$G(x, x') = \frac{\cos \Theta'_i \cos \Theta_o}{\|x - x'\|^2}$$

Visibility (V)

$$L(x' \rightarrow x'') = L_e(x' \rightarrow x'') + \int_S f_r(x \rightarrow x' \rightarrow x'') L(x \rightarrow x') V(x, x') G(x, x') dA$$

Kajiya 1986

# Radiosity Equation

$$L(x' \rightarrow x'') = L_e(x' \rightarrow x'') + \int_S f_r(x \rightarrow x' \rightarrow x'') L(x \rightarrow x') V(x, x') G(x, x') dA$$

Assume everything  
is Lambertian

$$\rho(x') = f_r(x \rightarrow x' \rightarrow x'') \pi$$

$$L(x') = L_e(x') + \frac{\rho(x')}{\pi} \int_S L(x) V(x, x') G(x, x') dA$$

Convert to  
Radiosities

$$B = \int_{\Omega} L_o \cos \theta d\omega$$

$$L = \frac{B}{\pi}$$

$$B(x') = B_e(x') + \frac{\rho(x')}{\pi} \int_S B(x) V(x, x') G(x, x') dA$$

# Radiosity Approximation

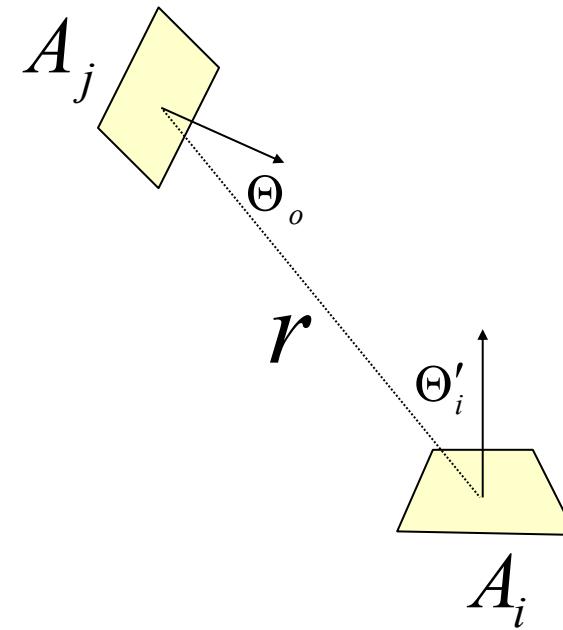

$$B(x') = B_e(x') + \frac{\rho(x')}{\pi} \int_S B(x) V(x, x') G(x, x') dA$$

Discretize the surfaces  
into “elements”

$$B_i = E_i + \rho_i \sum_{j=1}^N B_j F_{ij}$$

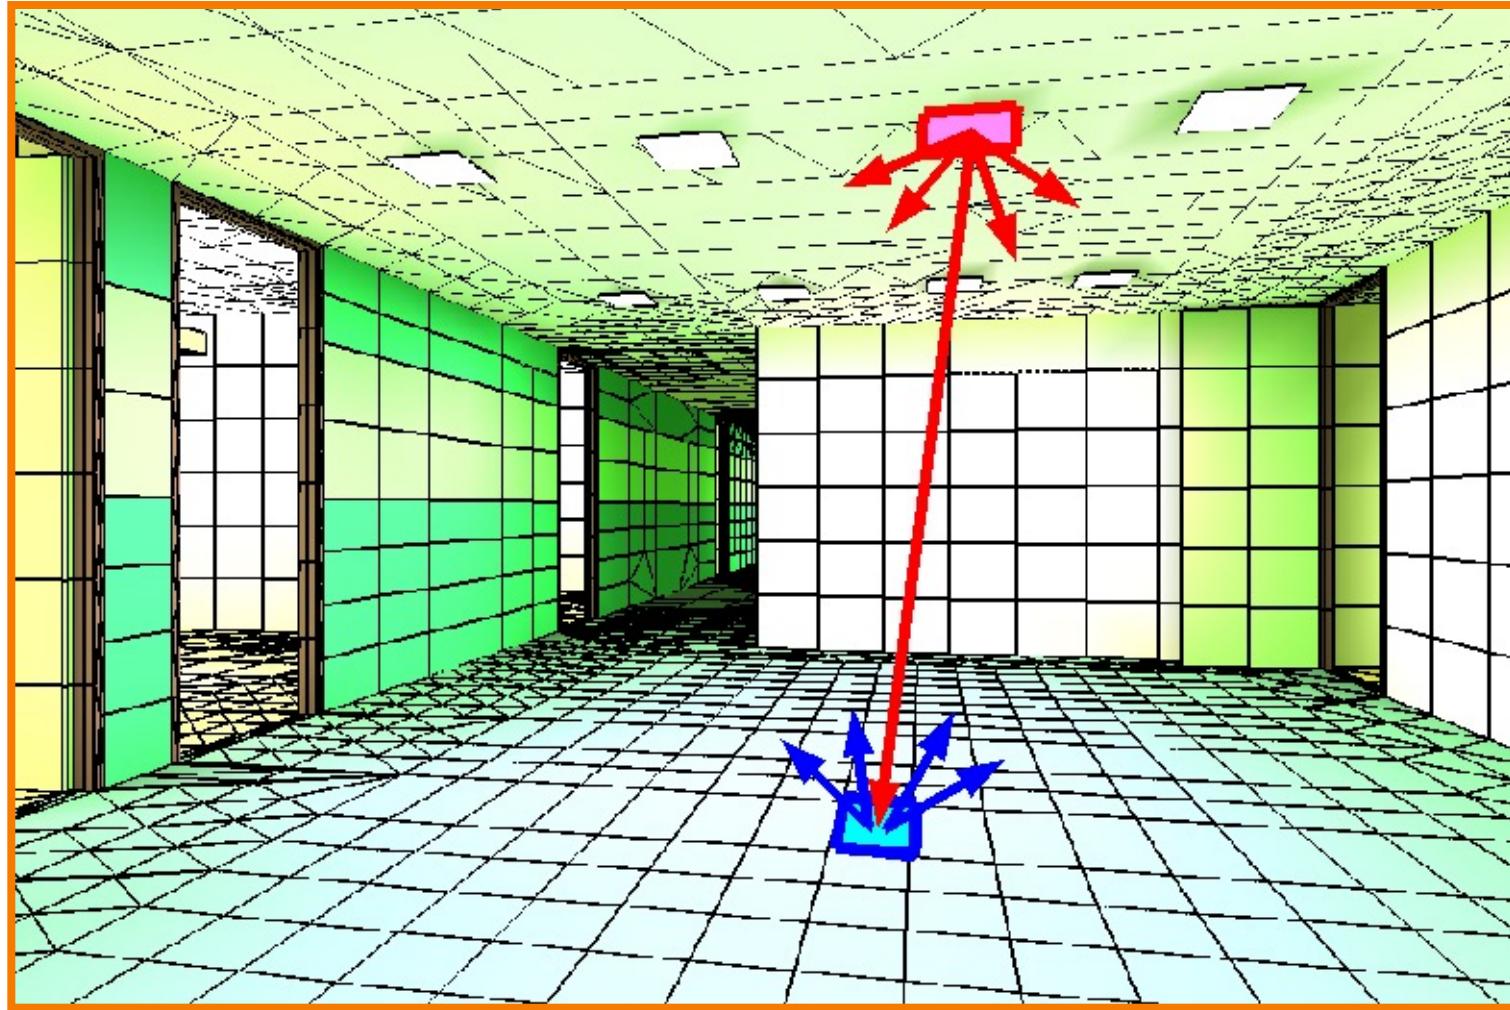

where “form factor” F is:

$$F_{ij} = \frac{1}{A_i} \int_{A_i} \int_{A_j} \frac{V_{ij} \cos \Theta'_i \cos \Theta_o}{\pi r^2} dA_j dA_i$$

# Radiosity Approximation

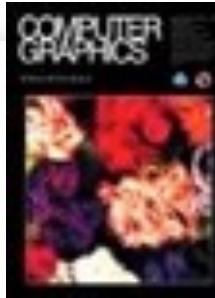

# Form Factor

## On the Form Factor between Two Polygons

Peter Schröder

Pat Hanrahan

Department of Computer Science  
Princeton University

1993

### Abstract

Form factors are used in radiosity to describe the fraction of diffusely reflected light leaving one surface and arriving at another. They are a fundamental geometric property used for computation. Many special configurations admit closed form solutions. However, the important case of the form factor between two polygons in three space has had no known closed form solution. We give such a solution for the case of general (planar, convex or concave, possibly containing holes) polygons.

**CR Categories and Subject Descriptors:** I.3.7 [Computer Graphics]: *Three-Dimensional Graphics and Realism – Radiosity*; J.2 [Physical Sciences and Engineering]: *Engineering*.

**Additional Key Words and Phrases:** Closed form solution; form factor; polygons.

### 1 Introduction

When using the radiosity technique, the form factor plays a central role. It

In this paper we present a formula for the form factor integral between two general polygons. The derivation of this formula is quite involved, and the interested reader is referred to [9] for a detailed derivation. The purpose of this paper is to bring this result to the attention of the graphics community.

### 2 Closed form solution

The form factor integral can be reduced to a double contour integral by two applications of Stokes' theorem [6]

$$\begin{aligned} \pi A_1 F_{12} &= \int_{A_1} \int_{A_2} \frac{\cos \theta_1 \cos \theta_2}{\|\vec{r}\|^2} dA_2 dA_1 \\ &= \frac{1}{4} \int_{\partial A_1} \int_{\partial A_2} \ln(\vec{r} \cdot \vec{r}) d\vec{x}_2 \cdot d\vec{x}_1 \end{aligned}$$

where  $\theta_1$ ,  $\theta_2$  are the angles between the normal vector of the respective surface and a radius vector  $\vec{r}$ , which connects two points on the surfaces. The above equation holds for all surfaces such that the same contour of the contour integral reduces
